

## COMPSYS302 Project B Indicative Marking Checklist

Grade	Task/Feature Description	Done?
<b>C</b>	Application runs following README instructions on Linux	Done
	User can log in	Done
	User can see who is currently online	Done
	User can see and edit their profile page, and see profiles for other users	Done
	User can send, receive, and view messages+files with someone online	Done
<b>B/B-</b>	Automatically refreshing page (or refreshing content) and/or notifications	Done
	Good use of database(s)	Done
	Use of encryption/hashing/data security within the application	Did it but didn't use it
	Embedded media player for audio/video	In profile page
	Displays confirmation of message receipt	
	Show user status (at a minimum, including online, away, offline)	
	(Local) blacklisting of disruptive clients / unwanted users	
	Logs out from the server upon application exit	
<b>B+/B</b>	Communication of text formatting of messages	
	Rate Limiting	
	Use of effective inter-app encryption/hashing/data security including handshake	
	Use of threading for communicating with login server regularly	
	Search for profile pages and messages	
	(Good) Page Templating	Done
	Modular and Pythonic code, including commenting and documentation	Commenting Done not others
	Group conversations	
<b>A</b>	Fallback P2P Networking if login server goes down	
	Multiple sessions (users) supported simultaneously	
	Unit Testing	
	Nice user interface (preferably compatible cross-browser)	It has colours xD
	Offline Messaging (without central server)	
	2FA (Two Factor Authentication)	
	Events co-ordination system	
	Fails gracefully when interacting with substandard clients	

**All inter-app features must be supported by at least two other nodes/clients as well.**

**You must list at least two supported clients (UPI) in your README.**

**You must include a copy of this table with your submission**, with the items that you think you have completed marked as done.

**You must complete all the requirements for the C grade (minimum spec) to be eligible for consideration for any higher grade.** To get the grade indicated on the left, you must complete at least **four** of the items from the appropriate grade. Items from a higher grade can be used to substitute for items in a lower grade (i.e. if you have three items in B/B- category and five items in the B+/B category, one of the B+/B category items can be counted towards the B/B- category).

To qualify for the item in the higher grade, it must be beyond what is necessary for the minimum spec. For example, within-app hashing is required to login to the login server – you must demonstrate additional encryption/hashing/data security beyond that.

**Please note that this marking checklist is indicative only, and may still change after the final deadline if there are other features identified or if rebalancing of the checklist is needed.**
